

Ethereum (ETH) Saturday Scorecard for 12 September 2026, 11:18 AM CT

Week of 8 Sep grade: Sunday map plus daily cards 8–11 Sep, settled against INDEX tape through Saturday 11:00 AM CT. Research, not advice.

Confidential — Not investment advice. For professional research use only.

Report Metadata

Field	Value
DATA_TIMESTAMP	Saturday, 12 Sep 2026, 11:18 AM CT
NEXT_US_OPEN (regular)	Monday, 14 Sep 2026, 8:30 AM CT / 9:30 AM ET
SYMBOL	ETH-USD (INDEX_ETHUSD) + CME ETH1!
OFFICIAL SPOT (INDEX last close)	\$2,532.66 (INDEX 60m bar ending 16:00 UTC / 11:00 AM CT)
COMPLETED DAILY (11 Sep)	\$2,515.48 (INDEX 1D 11 Sep 00:00 UTC)
DERIBIT INDEX	Not fetched this run — walls graded from published cards
DERIBIT_BOOK_TIMESTAMP	n/a — scorecard, not a live book reprint
CRYPTOGAMMA_STATUS	Not used
HOLIDAY FLAG	False — Labor Day (7 Sep) is +5 calendar days
DATA AVAILABILITY	INDEX 1D+60 and CME 1D+60 attached; Week-Ahead 7 Sep PDF; dailies 8–11 Sep
USER NEWS	Product lock: live Saturday scorecard. Public CPI used (BLS 11 Sep).

Trading Schedule Note: Full crypto session. Next U.S. cash open is Monday 14 Sep 2026. FOMC decision is Wednesday 16 Sep, 2:00 PM ET — that stamp sits in the 30-day sleeve, not in this grade.

1. Executive grade

Headline: the Sunday map and the Tuesday–Thursday cards described a coil. Friday CPI broke the \$2,520 coil. The \$2,400 put wall held. The \$2,566–\$2,580 fade wall did not.

INDEX week (Tue 8–Sat 12 Sep, UTC): low \$2,412.61 (10 Sep), high \$2,665.88 (11 Sep 14:00 UTC hour), Friday close \$2,515.48, Saturday last hour \$2,532.66. August CPI printed in line with consensus — headline +0.4% m/m and 3.4% y/y, core +0.3% m/m and 2.4% y/y. The squeeze was not a soft-print rally. It was event vol that accepted through the call cluster in two hours.

Net on the 7 Sep Week-Ahead: magnet hit, put wall hit, week-base partial, fade miss, Friday pin miss, weekly-close bull trigger still unfired. Daily cards 8 and 9 Sep grade Hit. 10 Sep Partial. 11 Sep Miss as a pin card, correct as a “do not fade \$2,520 without an hourly close” card. This file is a grade, not a Monday session plan.

2. How this desk grades a card

One card, five objects. Magnet (max pain or \$2,500 knot). Call wall. Put wall. Session fade or dip zone. Horizon box (week or 7-day). Hit means the object did the job named on the card. Partial means it was tested and then abandoned, or only one side of a box held. Miss means price accepted through the object on the horizon the card claimed. Wick-through with a close back inside is Partial on a fade, Hit on a support wall.

Public fence stays in force: magnet + two walls + hit/miss. No size. No entries. Not a signal room. No Elliott Wave. No 90-day table.

3. The week that printed

UTC day	Open	High	Low	Close
Mon 7 Sep (Labor)	2,515.38	2,536.60	2,466.62	2,490.53

UTC day	Open	High	Low	Close
Tue 8 Sep	2,490.36	2,507.97	2,441.63	2,485.40
Wed 9 Sep	2,485.53	2,523.98	2,443.50	2,468.73
Thu 10 Sep	2,468.55	2,484.70	2,412.61	2,438.08
Fri 11 Sep CPI	2,437.97	2,665.88	2,432.84	2,515.48
Sat 12 Sep (forming)	2,515.62	2,543.53	2,508.23	2,532.77

Source: INDEX_ETHUSD 1D. Saturday 12 Sep bar is forming (last 60m 16:00 UTC \$2,532.66). CME 10 Sep cash session — the CPI day on the listed calendar — printed H \$2,673 / L \$2,436.50 / C \$2,547.

Path in one line: Labor Day leftover under \$2,500 → Tuesday–Wednesday failed test of \$2,508–\$2,524 → Thursday PPI drift into \$2,413 → Friday 12:00 UTC CPI wick to \$2,433 then 13:00–14:00 UTC \$2,645 / \$2,666 → Friday mean-revert close \$2,515 → Saturday grind \$2,508–\$2,544.

4. Week-Ahead 7 Sep — the Sunday map

Published 7 Sep 5:15 PM CT from INDEX spot \$2,488.50. Coming-week base \$2,360–\$2,580. 30-day base \$2,280–\$2,680. Fade the August high \$2,566 until a weekly close through. Friday pack: 11 Sep 08:00 UTC expiry (max pain \$2,450) plus 8:30 AM ET CPI.

Item	Published 7 Sep	Week print	Grade	Why
Magnet	\$2,510 weekly knot / \$2,500 call	Sat last \$2,533; Fri close \$2,515	Hit	Spent four sessions on the knot, then left it after CPI
Fade wall	\$2,566–\$2,580 (Aug high / week cap)	High \$2,665.88	Miss	Intraday through the cap; no weekly close yet above \$2,566
Put wall	\$2,400 then \$2,357 Sep low	Week low \$2,412.61	Hit	Thursday wick held. No daily close through \$2,400
Week base	\$2,360–\$2,580 (50%)	Range \$2,413–\$2,666	Partial	Floor held. Friday high broke the published cap
Friday pin	11 Sep max pain \$2,450	CPI hour left \$2,450 for \$2,666	Miss	Expiry 08:00 UTC was before CPI. Pin did not survive the print
Bull trigger	Weekly close through \$2,566	Fri close \$2,515 / Sat \$2,533	Miss	Wick into the bull zone. Close still inside the old coil
30-day base	\$2,280–\$2,680	High \$2,666 tags the cap	Live	Still the working 30-day box into FOMC 16 Sep

Read-through: digestion was the right regime through Thursday. The miss is specific — the card told readers to fade \$2,566–\$2,580 while the Friday pin was live. The pin expired at 08:00 UTC, three and a half hours before CPI. After that stamp the fade was no longer the trade the Sunday file described. The bull sleeve required a weekly close through \$2,566. That close has not printed. A \$2,666 wick is not that close.

5. Daily cards 8–11 Sep

Card	Magnet	Call wall	Put wall	Base box	Grade
8 Sep	\$2,480 / \$2,500	\$2,550 fade	\$2,400	\$2,420–\$2,560	Hit
9 Sep	\$2,500 (10 Sep pain)	\$2,516–\$2,530 fade	\$2,440 / \$2,460	\$2,380–\$2,580	Hit
10 Sep	Fri magnet \$2,460	\$2,500 / \$2,550	\$2,400	\$2,380–\$2,550	Partial
11 Sep	Sat pin \$2,480	\$2,520 cluster	\$2,420	Wknd \$2,420–\$2,520	Miss

Grade is the card as a whole. Session-level objects are unpacked in Section 6.

8 Sep — Hit

Cash reopen after Labor Day. Magnet \$2,480–\$2,500. Session high \$2,507.97 died at the first fade zone. Low \$2,441.63 held above the \$2,400 put wall. Close \$2,485.40 inside the \$2,420–\$2,560 box. The card said flatten into the Wednesday 08:00 UTC pin if still inside \$2,470–\$2,490. That pin window passed without a trend.

9 Sep — Hit

Failed squeeze to \$2,523.75 / \$2,523.98. Fade zone \$2,516–\$2,530 did the job. Dip zone \$2,448–\$2,460 was touched; daily low \$2,443.50 tagged the \$2,440 put wall and recovered. Close \$2,468.73. Hourly ADX stayed a range tape. Correct session stance.

10 Sep — Partial

PPI morning. The card named \$2,400 as the put wall and \$2,444–\$2,455 as the dip-buy only if the hourly close held. INDEX low \$2,412.61 — a hold of \$2,400, a break of the dip zone. Close \$2,438.08, still inside the \$2,380–\$2,550 seven-day box. Put wall Hit. Dip Miss. Friday magnet \$2,460 was the next day's problem.

11 Sep — Miss as pin, right as event card

Published magnet was Saturday's \$2,480 pin, not Friday's already-expired 11 Sep stamp. Weekend box \$2,420–\$2,520. Bull needed an hourly close through \$2,520. That close printed on the 13:00 UTC bar at \$2,568.94 after a \$2,645 high, then the 14:00 UTC bar made \$2,665.88. The \$2,420 put wall saw a \$2,433.19 wick on the 12:00 UTC CPI minute and held. Fear & Greed had cooled to 56. Funding was not crowded. The miss is the pin forecast. The tell that paid was the hourly-close rule on \$2,520.

6. Session fades, dips, and the CPI hour

Session	Published fade / dip	What printed	Grade	Note
Tue 8 Sep	Fade \$2,508–\$2,529; dip \$2,459–\$2,463	H \$2,508 / L \$2,442 / C \$2,485	Hit	Coil. Cash reopen did not trend
Wed 9 Sep	Fade \$2,516–\$2,530; dip \$2,448–\$2,460	H \$2,524 failed / L \$2,444	Hit	Failed break at first call shelf
Thu 10 Sep	Dip \$2,444–\$2,455; put \$2,400	L \$2,413 / C \$2,438	Partial	Put wall held; dip zone did not
Fri 11 Sep AM	Coil \$2,420–\$2,520 into CPI	12:00 UTC L \$2,433 then H \$2,515	Hit	Open wick tested \$2,420 put
Fri 11 Sep PM	Do not fade \$2,520 without close	13:00–14:00 UTC \$2,645 then \$2,666	Miss	Call wall taken in two hours
Sat 12 Sep	Pin \$2,480 if still inside \$2,440–\$2,480	H \$2,544 / last \$2,533	Miss	Spot never returned to the pin

CPI hour anatomy (INDEX 60): 12:00 UTC opened \$2,463.70, swept \$2,433.19, rejected to \$2,514.94, closed \$2,479.19. 13:00 UTC opened \$2,471.45 and closed \$2,568.94 on a \$2,645.28 high (RSI 80). 14:00 UTC high \$2,665.88, close \$2,623.57. Implied move on the 11 Sep card was about $\pm$ \$70 into Saturday's expiry. The realized two-hour impulse was more than twice that band, which is what "event vol" means on this desk.

7. Walls versus headlines

News sleeve on the Friday card treated CPI as vol-only with consensus 3.4%. BLS delivered 3.4% y/y and +0.4% m/m. Core ran a tick hot versus the 0.2% monthly consensus. That is not a dovish surprise. ETH still accepted through \$2,520. Walls outranked the directional prior: the put wall held, the call wall did not, and the headline did not pick the side.

ETF tape inside the week was two-sided, not the sponsor of Friday. Confirmed prints on the cards: 8 Sep –\$24.29 million, 9 Sep +\$34.75 million, 10 Sep about –\$29.8 million. No single day cleared the \$50 million sensitivity trigger that would have moved 7-day Bear by 5–8 points. Friday's cash ETF print was not on the 11 Sep card and is not invented here.

8. Carry into Monday 14 Sep

This section is a hand-off, not a new 7-day forecast. Sunday 13 Sep still has a Week-Ahead factory if the operator runs it. Until that file exists, the live objects from this grade are:

- Magnet now in force: \$2,500–\$2,515 (Friday close + the old knot). Saturday spent the morning on \$2,508–\$2,544.
- Call wall that broke: \$2,520–\$2,550. Next published supply from the week's cards sits \$2,600 / \$2,666 wick / \$2,800. \$2,666 is a print, not a new wall until a book refresh.
- Put wall that held: \$2,400, with \$2,412.61 as this week's actual low and \$2,420 as Friday's first options shelf.
- 30-day base from 7 Sep (\$2,280–\$2,680) is still live. FOMC 16 Sep is inside that sleeve.
- Falsifier that did not fire: weekly close through \$2,200. Falsifier that is now closer: weekly close through \$2,566 would upgrade the 7 Sep bull sleeve after the fact.

Do not treat the \$2,666 wick as a weekly close. Do not treat Saturday's \$2,533 last as a pin. Research, not advice.

9. Sources and gaps

INDEX_ETHUSD 1D and 60, CME_DL_ETH1! 1D and 60, ETH_Walls_Week_Ahead_2026-09-07, ETH_Walls_Daily_2026-09-08 through 2026-09-11. CPI: BLS news release 11 Sep 2026, 8:30 AM ET. Core monthly consensus versus actual taken from the public Econoday/Reuters strip used the same morning.

Gaps: no live Deribit book on Saturday morning, so walls are graded as published, not re-laddered. No 11 Sep ETF create/redeem print in this file. No CryptoGamma. Saturday 12 Sep daily bar had not closed at the 11:18 AM CT stamp.

10. Disclaimer

This document is a grade of published ETH Walls cards. It is not investment advice, not a solicitation, and not a recommendation to buy or sell ether, ether futures, ether options, or any ETF. Cryptocurrency can gap through every wall named here. Options pin is a description of dealer inventory, not a price target. Past cards do not bind the next session.
