

Ethereum (ETH) Saturday Scorecard for Saturday, 19 September 2026, 7:09 AM CT

Week of 14 Sep: \$2,358 put held through FOMC; \$2,500 Friday pin missed; \$2,580 week box broke on the Friday squeeze. Research, not advice.

Confidential — Not investment advice. For professional research use only.

Field	Value
DATA_TIMESTAMP	Saturday, 19 Sep 2026, 7:09 AM CT
NEXT_US_OPEN (regular)	Monday, 21 Sep 2026, 9:30 AM ET / 8:30 AM CT — full week, no NYSE holiday
SYMBOL	ETH-USD (INDEX) · CME ETH1! cross-check · published Deribit walls (no live book this run)
OFFICIAL SPOT (INDEX last close)	Last completed 60-min: Sat 19 Sep 12:00 UTC / 7:00 AM CT \$2,639.36. Forming Sat daily last \$2,640.64
COMPLETED DAILY	Fri 18 Sep INDEX 1D: O 2,445.53 / H 2,645.95 / L 2,435.16 / C 2,611.16
WEEK HIGH / LOW (14–19 Sep)	High \$2,660.90 (Sat 19 forming INDEX 1D). Low \$2,357.75 (Tue 15 INDEX 1D)
DERIBIT INDEX	Not fetched this run — walls graded from published Sunday and daily cards
DERIBIT_BOOK_TIMESTAMP	Not fetched this run
CRYPTOGAMMA_STATUS	Not used — same as the daily cards this week
HOLIDAY FLAG	False. Labor Day 7 Sep is behind the tape. Next NYSE full close 26 Nov Thanksgiving
DATA AVAILABILITY	Week-Ahead 13 Sep + dailies 14–18 Sep. INDEX 1D/60 and CME 1D/60 attached through Sat 12:00 UTC
USER NEWS	None pasted. Event prints graded only as named on the cards (FOMC 16 Sep; CLARITY cloture 15 Sep; ETF days through 17 Sep)

Trading Schedule Note: Crypto prints 24/7. Grade window is the first U.S. cash session of the published coming week (Mon 14 Sep) through this Saturday stamp. Saturday 19 Sep 08:00 UTC expiry is already dead. Official weekly INDEX close is ~00:00 UTC Monday; the 2,666 weekly-close trigger is therefore Miss until that close prints. Friday ETF create/redeem is not on the tape.

1. Executive grade

Headline: the Sunday \$2,380–\$2,580 week box did not hold the cap. INDEX spent Monday on the \$2,509–\$2,511 knot and the \$2,520 pin, flushed to \$2,357.75 on Tuesday, held that low through Wednesday’s FOMC hour, then accepted \$2,600 on Friday and printed \$2,611.16. Saturday’s forming high is \$2,660.90 — still under the \$2,666 weekly-close trigger.

Sunday map, net: magnet Partial (lived on the knot Monday, abandoned it after the Tuesday flush). Friday \$2,500 max-pain pin Miss. \$2,600–\$2,800 call wall Partial (2,600 accepted; 2,700–2,800 never tagged). Downside \$2,412 Miss on Tuesday’s close; \$2,358 memory shelf Hit. Horizon box Miss. 30-day \$2,200–\$2,700 sleeve Live.

Daily-card line: Monday magnet Hit and the \$2,560 fade only a wick. Tuesday pin and \$2,425 dip both Miss. Wednesday \$2,358 hold Hit into a contained FOMC hour. Thursday repaired toward \$2,450–\$2,500. Friday fade of \$2,520–\$2,560 Miss — the session accepted \$2,600 and closed \$2,611. This file is a grade, not a Monday session plan.

2. How this desk grades a card

One card, five objects. Letters are not averaged into a fake composite. A wick through a fade wall is Miss on the fade if the card said “fade this.” A wick through a put wall that closes back above is Hit on support. A weekly-close trigger is Miss until a weekly close actually prints.

Object	Hit	Partial	Miss
Magnet	Spot spent time on it	Tested and left	Never approached, or left when the card said pin
Call wall	Rejected / faded on the claimed horizon	Wick through, close back inside	Hourly then session accept through
Put wall	Held on a close	Tagged, recovered, dip-zone failed	Hourly close through and stayed through

Object	Hit	Partial	Miss
Session fade / dip	Zone did the job named	One side of a two-sided zone worked	Zone was the break, not the trade
Horizon box	High and low inside	Floor or cap held, the other broke	Close outside the published box

Fourth grade, Live, is only for a 30-day sleeve that has not expired. Pin grades use the expiry timestamp, not the FOMC timestamp.

3. The week that printed

Path in one line: coil on the knot Monday → Tuesday liquidation through \$2,464 / \$2,425 to \$2,357.75 → FOMC Wednesday held the low and closed \$2,417 → Thursday grind \$2,446 → Friday squeeze \$2,435 → \$2,646, close \$2,611 → Saturday still \$2,639–\$2,661.

UTC daily	Open	High	Low	Close	Path note
Mon 14 Sep	2,476.93	2,614.15	2,464.74	2,515.54	Lived on \$2,520; \$2,614 wick; closed back \$2,516
Tue 15 Sep	2,515.30	2,519.53	2,357.75	2,397.39	CLARITY miss + flush; close through \$2,412
Wed 16 Sep	2,397.70	2,430.12	2,367.84	2,417.35	FOMC 25 bp; \$2,358 held on the close
Thu 17 Sep	2,417.42	2,482.00	2,412.54	2,445.54	Repair; did not reclaim \$2,500
Fri 18 Sep	2,445.53	2,645.95	2,435.16	2,611.16	Accepted \$2,560 then \$2,600; pin died
Sat 19 form.	2,611.48	2,660.90	2,602.10	2,640.64*	Last 60-min \$2,639.36 at 12:00 UTC

Official OHLC from INDEX_ETHUSD 1D. Saturday close is the forming stamp last, not an official daily close. Week range \$303.15 vs the Sunday weekly ATR \$258 (~1.17×). CME Fri 18 Sep cash close \$2,639.50 confirms the INDEX squeeze; CME is not official spot.

4. Week-Ahead scorecard

Published Sunday 13 Sep 5:15 PM CT. Coming-week base \$2,380–\$2,580. Friday 18 Sep max pain ~\$2,500. Call wall \$2,600–\$2,800. Hard invalidation: weekly close through \$2,200 or weekly close and hold above \$2,666.

Object	Published	Week print	Grade	Why
Magnet (knot)	\$2,508–\$2,511 SMA 50/200	Mon close \$2,516; then left	Partial	Spent Monday on it; Tuesday flushed and never re-pinned
Friday pin	18 Sep max pain ~\$2,500	Fri close \$2,611; Sat \$2,639	Miss	Pin required proximity into 08:00 UTC Friday. Spot was already leaving \$2,500 before the U.S. cash squeeze
Call wall	\$2,600–\$2,800 fade-first	Fri H \$2,646 / C \$2,611; Sat H \$2,661	Partial	\$2,600 accepted on Friday close. \$2,700–\$2,800 never tagged
Put / \$2,412	Defend \$2,412 then \$2,357	Tue L \$2,357.75 / C \$2,397	Partial	\$2,412 failed on Tuesday's close. \$2,358 memory shelf held and was the week's tell
Week box	\$2,380–\$2,580 base	H \$2,660.90 / L \$2,357.75 / last \$2,639	Miss	Close outside the cap. Floor missed by \$22 on the Tuesday wick
\$2,666 trigger	Weekly close and hold above \$2,666	Week high \$2,660.90	Miss	A weekly-close trigger is Miss until a weekly close actually prints
30-day box	\$2,200–\$2,700	Range still inside	Live	Sep-25 book still dominates. Neither \$2,200 nor \$2,700 printed

Sunday bull (\$2,580–\$2,720) needed a hold of \$2,500 through FOMC and a reclaim of \$2,566. That path printed late — after the Tuesday flush and after ETF outflows — not as the FOMC-hold-then-grind the card sketched. Sunday bear (\$2,220–\$2,380) needed a hawkish hike plus a loss of daily EMA 21 then \$2,356. The hike printed; the daily close through \$2,358 did not.

5. Daily cards

Card	Named objects	Grade	Why
Mon 14 Sep	Magnet \$2,520; fade \$2,548–\$2,560; dip \$2,480–\$2,500	Partial	Magnet Hit (close \$2,516). Fade Partial: 20:00 UTC hour tagged \$2,614 then closed back \$2,566 / day \$2,516. Dip held on the close.
Tue 15 Sep	Magnet \$2,500–\$2,520; hold \$2,464; dip \$2,448–\$2,425	Miss	Open sat on the magnet then the 13:00–18:00 UTC impulse took \$2,464 and \$2,425. Day close \$2,397. Zone was the break.
Wed 16 Sep	Hold \$2,358; pre-print coil \$2,380–\$2,425; fade \$2,425–\$2,460	Hit	Low \$2,367.84, close \$2,417. FOMC hour (18:00 UTC) ran \$2,368–\$2,430 and settled \$2,396. Put did the job named.
Thu 17 Sep	Chop \$2,300–\$2,560; Friday probe \$2,450–\$2,500; hold \$2,350/\$2,300	Partial	Range \$2,413–\$2,482, close \$2,446. Held the put side. Did not complete the \$2,500 pin attempt.
Fri 18 Sep	Fade \$2,520–\$2,560; dip \$2,460 then \$2,380; weekend \$2,440–\$2,580	Miss	13:00 UTC hour left \$2,493 and never returned. Close \$2,611 accepted \$2,560 and \$2,600. Saturday expiry \$2,460 pin already dead.

Session notes

Monday: the only clean pin of the week. Tuesday 08:00 UTC 15 Sep expiry sat near \$2,477–\$2,520 into the print, then U.S. hours did the damage — Senate CLARITY cloture failed 49–50 and the book flushed. That flush is graded on the Tuesday card, not as a Wednesday FOMC print. Wednesday 16 Sep 08:00 UTC expiry died before 2:00 PM ET; the event hour is the 18:00 UTC bar, not the morning pin.

6. Session fades, dips, and the event hour

Tuesday impulse, INDEX 60: 13:00 UTC high \$2,486 to low \$2,432; 14:00 UTC through \$2,388; 18:00 UTC printed the week low \$2,357.79 and closed \$2,411. Named dip \$2,425 was fuel, not a bid. Liquidations on the Wednesday card were long-heavy (~\$154–\$184m ETH of a \$500m+ tape).

FOMC Wednesday 2:00 / 2:30 PM ET = 18:00–18:30 UTC. The 18:00 UTC hour opened \$2,390, tagged \$2,430 / \$2,368, closed \$2,396. The 19:00 UTC hour stayed \$2,375–\$2,417. Delivered 25 bp to 3.75–4.00% was the priced path. Spot absorbed the statement above \$2,358 and never made the \$2,300 put wall live. Walls outranked the hawkish-prior: the hike printed and the bear path did not.

Friday squeeze, INDEX 60: 12:00 UTC still \$2,503. 13:00 UTC (8:00 AM ET) high \$2,576 close \$2,531. Subsequent hours accepted \$2,560 then \$2,600 and tagged \$2,646 into the daily close \$2,611. The Friday card's fade \$2,520–\$2,560 was void once hourly closes held above \$2,560. Saturday 08:00 UTC expiry (published max pain ~\$2,460) printed with spot \$2,626–\$2,659. Already dead. Do not grade that pin against Friday's cash close.

7. Walls versus headlines

Two High-weight headlines sat on the week: CLARITY cloture failed 15 Sep, and FOMC hiked 25 bp on 16 Sep. ETF flow flipped from Monday's +\$121.0m to Tuesday–Thursday outflows (–\$141.5m / –\$224.1m / –\$39.2m on the published cards; Friday create/redeem not on this tape). Those headlines explain the Tuesday flush. They do not explain Friday's acceptance through \$2,600. The live objects that mapped the path were the \$2,358 shelf, the dead \$2,500 Friday pin, and the \$2,600 call wall that stopped being supply. When walls and the directional prior disagreed after FOMC, the walls won.

8. Carry into Monday

Hand-off only. No new probability table.

Object	Status into Mon 21 Sep
Magnet now in force	\$2,500 / \$2,600 cluster on the 25 Sep book. Spot is sitting on \$2,639–\$2,661, above the old SMA knot
Broken call	\$2,560 daily fade and \$2,600 Friday wall accepted. \$2,666 week-high trigger from 11 Sep is tagged on the Saturday wick (\$2,660.90) but not closed weekly

Object	Status into Mon 21 Sep
Held put	Tuesday \$2,357.75 / \$2,358 shelf. \$2,200 Sep-25 put wall never traded
30-day box	Live: \$2,200–\$2,700. High \$2,661 still inside the cap
Falsifiers	\$2,666 weekly close and hold: not printed. \$2,200 weekly close: not printed. Two-week ETF outflow ≥\$300m after the +\$216m prior Friday: 15–17 Sep already printed three outflow days; Friday 18 Sep print absent
Dead objects	18 Sep \$2,500 max pain. 19 Sep \$2,460 Saturday pin. Monday 14 \$2,520 daily pin

Monday inherits a market that already spent the \$2,580 week cap and is one Saturday wick shy of the \$2,666 Sunday invalidation. That is a carry, not a session card.

9. Sources and gaps

Week-Ahead PDF 13 Sep 5:15 PM CT. Daily PDFs 14, 15, 16, 17, 18 Sep. INDEX_ETHUSD 1D and 60; CME_DL_ETH1! 1D and 60. Official spot is the last completed INDEX 60-minute close at this stamp (19 Sep 12:00 UTC, \$2,639.36). Event prints used only as the cards named them: FOMC 16 Sep 2:00 PM ET, Senate CLARITY cloture 15 Sep, SoSoValue / news ETF days through 17 Sep.

Gaps: no live Deribit book this run — walls graded from published cards, not a re-laddered Saturday book. Friday 18 Sep ETF create/redeem not on the tape. CryptoGamma / Vol Lab was not machine-readable on any card this week. Saturday INDEX 1D is forming. CME 60 ends 19 Sep 05:00 UTC and is a cross-check only. No Elliott Wave attachment was used.

10. Disclaimer

Research for ETH Walls readers; not investment advice. Levels and grades are a path map, not an order. Crypto can gap through every wall named here. Past cards do not bind the next session. This file is a Saturday grade of published objects. It is not Monday’s daily and not Sunday’s Week-Ahead.
