

Ethereum (ETH) Saturday Scorecard for Saturday, 26 September 2026, 7:53 AM CT

Week of 21 Sep grade: \$2,720 cap broke, \$2,600 put held, Saturday pinned \$2,700. Research, not advice.

Confidential — Not investment advice. For professional research use only.

Field	Value
DATA_TIMESTAMP	Saturday, 26 Sep 2026, 7:53 AM CT
NEXT_US_OPEN (regular)	Monday, 28 Sep 2026, 9:30 AM ET / 8:30 AM CT
SYMBOL	ETH-USD (INDEX) — scorecard grade, not a session card
OFFICIAL SPOT (INDEX last close)	2,687.54 (60m 11:00 UTC / 6:00 AM CT 26 Sep, last completed)
DERIBIT INDEX	Not fetched this run — walls graded from published cards
DERIBIT_BOOK_TIMESTAMP	Not fetched this run
CRYPTOGAMMA_STATUS	Not fetched this run
HOLIDAY FLAG	False — next NYSE full close is Thanksgiving, 26 Nov 2026
DATA AVAILABILITY	Week-Ahead 20 Sep + Daily 21–25 Sep + INDEX 1D/60. No CME CSV. No Friday ETF create/redeem print.
USER NEWS	None pasted. Public event prints taken only from the published cards.
COMPLETED DAILY	25 Sep UTC bar: O 2,687.13 / H 2,742.46 / L 2,666.83 / C 2,691.30
WEEK HIGH / LOW (INDEX 1D)	High 2,806.85 (21 Sep) · Low 2,627.29 (24 Sep). Both spikes confirmed on INDEX 60.

Trading Schedule Note: U.S. cash Mon 21–Fri 25 Sep ran full session. Saturday 26 Sep Deribit daily expired 08:00 UTC (already dead at this stamp). Next regular NYSE open is Monday 28 Sep. No holiday inside the graded week.

1. Executive grade

Put \$2,600 held. Week cap \$2,720 broke. Saturday pinned \$2,700. Official spot is the last completed INDEX 60-minute close at 11:00 UTC / 6:00 AM CT: \$2,687.54. The Saturday daily bar is still forming (H \$2,697 / L \$2,679 / last \$2,688). Sunday’s Week-Ahead boxed the coming week at \$2,480–\$2,720 with a Friday 25 Sep 08:00 UTC book as the event and a weekly-close invalidation at SMA 50 \$2,473. The tape spent Monday through the cap (high \$2,806.85 at 20:00 UTC, confirmed on INDEX 60), never tagged the \$2,480 floor, and did not print a weekly close — a weekly-close trigger is Miss until a weekly close actually prints. Net on the Sunday map: put Hit, call Miss, box Partial, Friday pin Partial. Daily cards were two-sided and mostly honest after Monday. Monday’s fade \$2,747–\$2,764 was the break, not the trade. Tuesday’s \$2,740–\$2,760 magnet printed. Wednesday’s \$2,786 fade held and the \$2,700 dip did not. Thursday’s \$2,600 put absorbed the week low at \$2,627. Friday’s \$2,731–\$2,750 fade and the Saturday \$2,700 pin both did the job named. This file is a grade, not a Monday session plan.

2. How this desk grades a card

One card, five objects. Fourth grade, Live, is only for a 30-day sleeve that has not expired. We do not average letters into a composite score. A wick through a fade wall is Miss on the fade if the card said fade this. A wick through a put wall that closes back above is Hit on support. Grade the published wall, not a re-laddered Saturday book.

Object	Hit	Partial	Miss
Magnet	Spot spent time on it	Tested and left	Never approached, or left and never returned when the card said pin
Call wall	Rejected / faded on the horizon claimed	Wick through, close back inside	Hourly then session accept through
Put wall	Held on a close	Tagged, recovered, dip-zone failed	Hourly close through and stayed through
Session fade / dip	Zone did the job named	One side of a two-sided zone worked	Zone was the break, not the trade
Horizon box	High and low inside	Floor or cap held, the other broke	Close outside the published box

Source: ETH Walls Saturday Scorecard rubric. Same fence as every other public file: magnet + two walls + hit or miss. No size. No entries. No Elliott Wave.

3. The week that printed

Window: first U.S. cash session of the published coming week (Monday 21 Sep) through this Saturday stamp. Official high / low from INDEX 1D; both extremes confirmed on INDEX 60 so a CME print is not treated as INDEX. CME files were not attached.

UTC day	Open	High	Low	Close	One-line path
Mon 21 Sep	2,644.34	2,806.85	2,642.85	2,775.61	Squeeze through 2,720. Wick 2,807 at 20:00 UTC.
Tue 22 Sep	2,775.43	2,777.13	2,715.42	2,753.19	Digest under Monday high. Lived in 2,715–2,777.
Wed 23 Sep	2,753.16	2,788.08	2,634.86	2,683.90	Fade 2,788 worked. NY dump through 2,700 to 2,635.
Thu 24 Sep	2,683.85	2,704.96	2,627.29	2,686.98	Week low 2,627 at 09:00 UTC. 2,600 put held.
Fri 25 Sep	2,687.13	2,742.46	2,666.83	2,691.30	08:00 UTC weekly cut ~2,682, then 2,742, fade to 2,691.
Sat 26 Sep*	2,691.26	2,697.11	2,678.72	2,688.14	Forming. 08:00 UTC daily pinned 2,691. Still 2,688.

* Saturday 26 Sep UTC daily is forming. Last completed daily is Friday 25 Sep (C \$2,691.30). Week range for the grade: high \$2,806.85 / low \$2,627.29.

Path in one line: Sunday close \$2,645 → Monday impulse through every named call shelf to \$2,807 → Tuesday digest \$2,715–\$2,777 → Wednesday reject \$2,788 and flush to \$2,635 → Thursday probe \$2,627 and reclaim \$2,687 → Friday weekly cut \$2,682, spike \$2,742, settle \$2,691 → Saturday 08:00 UTC daily pinned \$2,691 and is still there.

4. Week-Ahead scorecard

Published Sunday 20 Sep 2026, 7:15 PM CT. Coming-week base \$2,480–\$2,720. Bull \$2,720–\$2,920. Bear \$2,200–\$2,480. Friday 25 Sep ~2.02B notional was the named event. Practical magnet \$2,560–\$2,680 plus \$3,000C inventory. Invalidation: weekly close through \$2,473.

Object	Published (20 Sep)	Week print	Grade	Why
Magnet	Fri cluster 2,560–2,680; SMA knot 2,473 / 2,516	Lived 2,627–2,807. Knot never tagged.	Partial	Upper half of the cluster after Wed. Knot untouched. Sat 2,700 did the pinning.
Call wall	2,667 then 2,720; Fri 3,000C inventory	Mon accepted 2,720. High 2,806.85. 3,000 never seen.	Miss	Hourly then session accept through 2,720. Close 2,776 Mon. Wick is not a 3,000 test.
Put wall	2,549 / 2,480 / 2,473 SMA50 / 2,358 fail	Week low 2,627.29. None of the named puts tagged.	Hit	Held on every close. 2,600 Fri put (later cards) was the live shelf, not 2,473.
Fri pin / fade	Oscillate 2,560–2,680 into 25 Sep 08:00 UTC	08:00 UTC ~2,682 then 2,742. Not 2,560.	Partial	Cut printed the top of the box, then expanded. Sat 2,700 pin was cleaner.
Horizon box	Base week 2,480–2,720	H 2,806.85 / L 2,627.29 / Sat ~2,688	Partial	Floor held. Cap broke Mon. Forming close back inside. Weekly close has not printed.
30-day sleeve	Base 2,250–2,900	Week high 2,807 still inside 2,900	Live	Sleeve has not expired. Not re-forecast here.

Net on the Sunday map: magnet Partial, call Miss, put Hit, Friday pin Partial, week box Partial, 30-day Live. One-line: put held, cap broke.

5. Daily cards

Each session card named its own magnet, call wall, put wall, and fade/dip. Monday used the 22 Sep 08:00 UTC ODTE book. From Wednesday the load-bearing expiry was Friday 25 Sep 08:00 UTC. Friday's own card rolled the pin to Saturday 26 Sep 08:00 UTC — and that Saturday cut had already printed before this 7:53 AM CT stamp.

Session	Card objects	INDEX print	Grade	Why
Mon 21	Fade 2,747–2,764; dip 2,660–2,640; call 2,800; put 2,640	H 2,807 / L 2,643 / C 2,776	Miss	Fade zone was the break, not the trade. Close accepted through 2,764. Put 2,640 tagged and recovered — that sleeve Hit.
Tue 22	Fade 2,800; dip 2,700–2,680; pin 2,740–2,760	H 2,777 / L 2,715 / C 2,753	Partial	Magnet Hit (close 2,753). 2,800 call and 2,680 put never approached.
Wed 23	Fade 2,786–2,800; dip 2,700–2,720; put 2,660	H 2,788 / L 2,635 / C 2,684	Partial	Fade Hit (rejected 2,788). Dip Miss (became the break). Put 2,660 Partial — hourly close 2,654, daily close back 2,684.
Thu 24	Fade 2,695–2,720; put 2,600; dip 2,552–2,575	H 2,705 / L 2,627 / C 2,687	Hit	2,600 put held on the week low. Fade only tagged the low end (2,705). 2,552 never seen.
Fri 25	Fade 2,731–2,750; dip 2,680–2,699; Sat pin 2,700 / 2,800	H 2,742 / L 2,667 / C 2,691	Hit	Fade rejected 2,742. Sat 08:00 UTC already printed 2,691 against 2,700 max pain. 2,800 untouched.

Monday 21 Sep — Miss

Card at 5:17 AM CT had spot \$2,719, a fade at \$2,747–\$2,764, dip-buys at \$2,660–\$2,640, and a 22 Sep 08:00 UTC pin. INDEX ran \$2,643–\$2,807 and closed \$2,776. The fade zone was accepted on the hour and on the session. The \$2,800 call was only a wick (20:00 UTC high \$2,806.85, that hour closed \$2,779). The \$2,640 put was tagged at the Monday low and recovered — Hit on that sleeve, Miss on the card as a whole.

Tuesday 22 Sep — Partial

Card at 5:08 AM CT faded \$2,800 and bought \$2,700–\$2,680 with a \$2,740–\$2,760 pin into Wednesday. Print was \$2,715–\$2,777, close \$2,753. Magnet Hit. Neither wall was tested. ETF +\$270M on Monday was already on that card and does not change the grade.

Wednesday 23 Sep — Partial

Card at 5:02 AM CT faded \$2,786–\$2,800 unless an hourly close held \$2,807, and bought \$2,700–\$2,720 with a stop under \$2,660. High \$2,788.08 at 04:00 UTC rejected. The dip zone then became the break: 14:00–16:00 UTC sliced \$2,646 / \$2,635 with an hourly close \$2,654 through the \$2,660 put. Daily close \$2,684 reclaimed the put. Fade Hit, dip Miss, put Partial.

Thursday 24 Sep — Hit

Card at 5:05 AM CT had already lost the squeeze and named \$2,600 as the live Friday put wall. Week low printed \$2,627.29 at 09:00 UTC on INDEX 60 — tagged, recovered, daily close \$2,687. The \$2,552 EMA dip was never needed. Fade \$2,695–\$2,720 only saw \$2,705. Put wall did the job the card named.

Friday 25 Sep — Hit

Card at 5:46 AM CT printed after the Friday 08:00 UTC weekly cut and rolled the pin to Saturday 26 Sep (max pain \$2,700, call \$2,800). Friday cash high \$2,742 died in the \$2,731–\$2,750 fade. Saturday 08:00 UTC bar opened \$2,687, high \$2,697, closed \$2,691 — pin against \$2,700, already dead at this stamp. \$2,800 was not a Friday or Saturday event.

6. Session fades, dips, and the event hour

No CPI, NFP, or FOMC printed inside the graded week. The Week-Ahead named Friday 25 Sep 08:00 UTC as the event (the 2.02B book). Grade that pin against the expiry timestamp, not against Friday durables or UoM.

Friday 08:00 UTC bar: O \$2,676 / H \$2,696 / L \$2,672 / C \$2,682. That is the top of Sunday's \$2,560–\$2,680 magnet, not the middle. The next three hours expanded to \$2,742.04 (11:00 UTC) before fading to a Friday daily close \$2,691. Anatomy: the cut held the handle, the hedge book did not cap the next three hours, and the session still closed back on the magnet. A wick to \$2,742 after the stamp is not a Friday pin failure in the Sunday sense — Sunday's box was already broken on Monday — but it is why the Friday-pin object is Partial rather than Hit.

Saturday 26 Sep 08:00 UTC (03:00 AM CT) is already dead: O \$2,687 / H \$2,697 / L \$2,687 / C \$2,691. Last completed hour at 11:00 UTC still \$2,688. That is a clean pin against the Friday card's \$2,700 max pain. Durables and final UoM on Friday morning were second-tier on every card and did not produce a separate impulse hour on INDEX 60.

7. Walls versus headlines

The week’s headline tape on the cards was the ETF streak: Friday 18 Sep +\$144M, then +\$270M / +\$162M / +\$105M / +\$66M through Thursday 24 Sep as carried on the dailies. That flow sleeve is why Monday was allowed to run. It did not keep \$2,720 as resistance, and it did not keep Wednesday from tagging \$2,635. The \$2,600 put wall on Thursday still held after four green ETF days and a \$180 wash. Walls outrank the directional prior when they disagree: the call wall was wrong on Monday, the put wall was right on Thursday, and the ETF prior does not get to rewrite either grade. Friday 25 Sep create/redeem is not on this tape — named as a gap, not invented.

8. Carry into Monday

Hand-off objects only. No new 7-day mix. No Monday session card.

Object	State at this stamp
Magnet now in force	\$2,700 Saturday max pain that printed. Spot \$2,688 still on it.
Broken call	Week cap \$2,720 and last-week high \$2,667 — both accepted Monday. \$2,800 was a wick only (close never held).
Held put	Friday \$2,600 put wall held at \$2,627. Sunday \$2,473 SMA 50 / \$2,480 floor never tagged.
30-day box	Live. Week-Ahead base \$2,250–\$2,900. Week high \$2,807 is inside the cap.
Falsifiers that fired	Daily close through \$2,720 (Mon). Sunday fade at \$2,667.
Falsifiers that did not	Weekly close through \$2,473 — week has not closed. Daily close through \$2,358. \$2,600 put lost on a close.
Dead expiries	21–25 Sep dailies and Friday 25 Sep weekly: off the board. Saturday 26 Sep 08:00 UTC: already dead, pinned \$2,691.

A weekly-close trigger is Miss until a weekly close actually prints. Say that every week. Forming Sunday bar is not a close.

9. Sources and gaps

Week-Ahead: ETH_Walls_Week_Ahead_2026-09-20. Session cards: ETH_Walls_Daily_2026-09-21 through 2026-09-25. Official tape: INDEX_ETHUSD 1D and 60. Week high \$2,806.85 confirmed on the 21 Sep 20:00 UTC hour. Week low \$2,627.29 confirmed on the 24 Sep 09:00 UTC hour.

Gaps: CME_DL_ETH1! 1D/60 not attached — CME is a cross-check only; INDEX remains official spot. Fresh Deribit book not fetched; walls graded from the published cards. Friday 25 Sep U.S. ETF create/redeem not on the tape. CryptoGamma / Vol Lab not machine-readable on any card this week. No Elliott Wave file was used.

10. Disclaimer

Research for ETH Walls readers; not investment advice. Levels and grades are a path map, not an order. Crypto can gap through every wall named here. Past cards do not bind the next session. This file is a grade, not a Monday session plan.
